Majesty

Custom Wood New Construction and Replacement Window

Lower profile lock

High end architectural design features

Majesty features

When the traditional look of genuine wood is preferred, the Harvey Majesty window is your best choice. It combines the warmth and beauty of wood inside with a maintenance free aluminum clad exterior. The Majesty custom wood window offers endless possibilities for your remodeling or new construction plans.

Because Majesty windows are custom made, that means no additional carpentry is required as with other wood windows. They are available in a variety of styles including round tops, trapezoids, ellipses and architectural shapes.

- Federal tax credit eligible with performance upgrade
- ENERGY STAR® qualified with standard Double Low-E/Argon gas-filled glazing system (double hung)*
- Fully weatherstripped
- Standard top sash lift rail (double hung)
- Recessed hardware for unobstructed views
- Both sashes tilt in for easy cleaning (double hung)
- Easy to operate, pre-calibrated block and tackle system never needs adjustment (double hung)
- Casement and awning windows available in pine or oak
- Two frame types available: 3-1/4" replacement, 4-9/16" new construction with fin
- Locking fiberglass half screen (double hung)

*Majesty casement and awning windows have the option of Double Low-E/Krypton to qualify as ENERGY STAR

†Majesty windows can qualify for a federal tax credit under The American Recovery and Reinvestment Act of 2009. For the latest program guidelines and qualifications, please visit harveybp.com and consult a tax professional.

.35 U-Factor or lower are ENERGY STAR qualified in all 50 states. For structural performance values and other product specifications, visit harveybp.com.

U-factor measures the rate of non-solar heat transfer from one side of the window to the other. Heat transfer implies both heat loss out of a living space during cold weather and non-solar heat gain during hot summer months. The lower the U-factor, the better the performance.

R-value measures the resistance of a glazing material or fenestration assembly to heat flow. A high R-value window has a greater resistance to heat flow and a higher insulating value than one with a low R-value.

Solar Heat Gain Coefficient (SHGC) measures how well a product blocks heat from the sun. The lower the SHGC, the better a product is at blocking unwanted heat gain.

Visible Transmittance (VT) measures how much light comes through a product. The higher the VT, the more light that comes through.

About Harvey Building Products

Harvey has built a solid reputation as a leading manufacturer and distributor of quality building products. A family-owned and operated business with over 45 years' experience, Harvey Building Products is known for outstanding craftsmanship and superior service as well as standing behind every product we make. In addition to manufacturing durable, attractive windows, doors and patio rooms, Harvey distributes a full line of highly respected building products to professional contractors and builders throughout the Northeast.

We understand what it takes to be part of your home.™
